

EXCITING 2011 SYSTEM SALES!

Scott Campbell
C'treat Systems Sales Manager
Scott.Campbell@itt.com

We're continuing to see strong business around the world, especially in the Gulf of Mexico (USA) and the Southeast Asia (Pacific) regions. Here are just a few of our recent project awards and deliveries from across the globe.

A Few Recent C'treat Contract Awards

Northwest Australia

C'treat is providing two Model FD402-6-2 watermakers to platforms north of Barrow Island. This is part of a \$29 Billion LNG project on the Australian Northwest Shelf. Each watermaker will produce 36m³/day of potable water and 18 m³/day of LoTDS (<5 ppm) water. A Model UV-29-3 Ultraviolet Sterilization unit to handle 58 m³/hr of potable water is also being supplied. All equipment will be IEC Ex certified to Australian Standards.

Deepwater Gulf of Mexico (USA) Project

C'treat was awarded a contract for two Model FD602-8-2 watermakers to support a \$4 Billion project located in 5,200 feet of water. The watermakers have been designed to provide 80 m³/day of high quality water (<100 ppm chlorides). The units are for operation in a NEC Cl 1 Div 2 Grp D environment.

Arabian Gulf Project

C'treat is replacing a competitor's watermaker on a platform in the SA sector Zuluf Field platform. Our Model FD301-4 replacement watermaker produces 30 m³ of potable water per day.

Eastern Mediterranean Project

C'treat recently shipped our second watermaker to the "East Med" sector. This unit, for the Tamar Field, is a Model FD301-4 watermaker that produces 48 m³/day of potable water.

One Recent C'treat System Delivery

In June, C'treat shipped two Model FD401-4 watermakers to the Bongkot field in the Gulf of Thailand. These watermakers are a single-pass design, capable of producing 60 m³/day (16K USgpd) of product water to World Health Organization (WHO) guidelines. Our units are certified for operation in an IEC Zone 2 environment and replace competitor equipment.

SPECIAL CLEARANCE SALE

BEST-EVER PRICE:

US\$ 79,900

if shipped by 2011 year end

Capacity: Up to 20,000 USgpd (76 m³/day)

Included in the price: Five reverse osmosis membranes; system commissioning; and initial operational spares and consumables (approx. 3-month supply).

One available. "First Come, First Served." For more information, call: +1 281 367 2800 or e-mail: ctreat@ctreat.com
