

ITT C'treat Offshore Custom Water Systems

C'treat's considerable experience in offshore desalination has been extended to include integrated water treatment and handling systems for offshore installations. C'treat has provided seawater and freshwater filtration, pumping, and storage packages; ultraviolet and chlorine sterilization packages; and completely custom engineered water systems to customers located throughout the world for over 30 years.

Products & Services

Pressure Sets

C'treat pumping stations and pressure sets, utilizing Goulds – ITT pumps, are built to stringent standards demanded by the offshore industry.

Turbine Wash

Demineralized water is used for many purposes on offshore platforms, including turbine washing. These requirements are met with C'treat demineralization systems, each specifically designed for your project.

Storage

Potable water storage tanks, complete with level instrumentation, are provided on single-point lift frames for ease of handling and quick installation and commissioning.

Complete System Packages

C'treat can provide some or all of the above systems on one frame, fully assembled and tested. Our experience with offshore specifications, provides efficiencies and value to our customers by integrating complete water systems into single units.
